

DuraTPE® Series Coil Spring Buffer

Instructions for Installation

DuraTPE®/ DuraTPE® Plus/ DuraTPE® Pro/ DuraTPE® Super

(Do not Copy) These instructions are part of an Installation manual that is under Copyright Protection by RubberShox®.

Note: This product gives added support for automotive coil springs to prevent sagging. It also provides a stiffer/more stable suspension that absorbs and dissipates the shock from potholes and rough roads. This product reduces stress on tires and the suspension which will enhance the vehicle's operational life span.

Suggest Tool List

Floor Jack x 1, Jack Stands x 2, Wheel Block x 2, WD-40, Rubber Scissor

Parts List

DuraTPE® Series x 2 (a Pair)

Preparation

- For front-installation, make sure vehicle is on a hard (concrete) surface and apply the parking brake. Place blocks under rear wheels to prevent the vehicle from rolling.
- Check your vehicle owner's manual for the proper contact points then jack up each tire to its recommended servicing height. For a safe installation and equal weight distribution, position the jack stands under the contact points corresponding with each wheel.
- Once each tire is properly elevated, the coil spring is relaxed at full extension. It is recommended that you remove the wheel for easier installation.
- Using a damp cloth, clean away all debris on your coil spring before installing this product. (specially in center 3-4 coils)
- Measure the spring spacing between the coils to determine which product size (A+ .. F) should be selected (See Fig 1, "D" for measuring points), please measure center 2-3 spring distance, so to get an average for the spacing distance.

Choose the Right Size for Your Coil Spring (Ref. Selection Table)

Based on the measurement of you coil spring gap D (Fig 1). You can pick correct size buffer.

For Example: : if your rear coil spring gap D is 2.2". it falls into A or A- size. You can choose A- for easier installation or A for more ground clearance and support.

- Please jack up your vehicle to measure the coil spring gap, D.

- Note:** Our products do not support the coil spring gap, D, larger than 3.5" and smaller than 0.55".

CSB Series Fitting Table

Measurement	Size
2.7 - 3.0"	A+
2.0 - 2.5"	A
1.9 - 2.2"	A-
1.6 - 1.9"	B+
1.4 - 1.7"	B
1.3 - 1.5"	C
1.1 - 1.3"	D
0.8 - 1.1"	E
0.5 - 0.9"	F

Installation

- Tip1:** If the installation is too hard due to the buffer height H1 is too tall, you can cut the inside ring of the buffer to make installation easy (Fig 3).
- Tip2:** If the buffer you choose is too long and overlap on the coil spring, please cut it to align top and bottom (Fig 4).

- After determining the product size, thoroughly Spray WD-40 onto both the inside/outside Buffer Grooves and the Coil Spring (this lubrication will make the insertion smoother).

Start from the widest spacing on your coil spring to begin fitting on the buffer. To fit the coil spring into the buffer, slide the spring coils into the buffer groove first. Then section by section, push to fit the well-lubricated buffer groove around coil spring until it is completely seated.

Fig.3

Fig.4

- Continue the process using WD40 to keep the spacing between the coil spring and the buffer groove well lubricated.
- Once both the spring and buffer are well seated, begin pushing/sliding/ twisting the product to the tightest position that will maximize the highest buffering support (keep lubricated with WD40 again if needed.)
- For additional support, zip tie the buffer to the coil spring. (This won't be necessary if the fit is snug.)
- Release the Jack (or Stand), and return the tire to the ground. There should be around 0.5" ~ 1.5" added lift, depending on the spring type once it is bearing the car's weight.
- To maximize coil spring support, insert 2 buffers of matching size onto one coil spring (if spring length permits).
- A test drive is suggested after installation. The ride should feel a little stiffer. Drive Safely.
- This product is primarily used to support the Coil Spring and prevent sagging. It provides a stiffer/more stable suspension that will absorb and dissipate the shock from potholes and bad roads while reducing stress on the suspension and tires. This enhances the vehicle's operational life span.
- If you require a higher ground clearance, ref. to Model: RBxx-xx-xx/ARBxx-xx-xx, Rubber Block Coil Spring Booster that may be inserted onto the top/bottom of the Coil Spring.
- In cases when going off road often or the buffer does not have a tight fit (not recommended), drill two 6.5mm diameter holes on each side (180 Degree from each other) using an F 13/16" drill head. Put zip tie through the hole and tie it to the coil spring. Make sure it is tightly zipped on both sides of the buffer.

Dimensions Table (Unit: Inch)

To assist with installation, please feel free to trim up to ¼ inch from the inner groove edge. This will allow the enough clearance to secure the DuraTPE® Series coil spring buffer in the spring.

Note: Measured distance 0.04" ~ 0.08" off

Size	Series	Model	H1	H2	D1	D2	D3	D4	T	G2

FAQ

Q. What's the difference between the various DuraTPE Series? How do they combine with the Rubber Booster Block?

A. There are four individual series for DuraTPE with different hardness levels: CSB, CSBPlus, CSBPro and CSBSuper.

- CSBSuper: 2000 to 6000 Lbs. Max. 7000Lbs combined with Booster Block
- CSBPro: 2000 to 4500 Lbs. Max. 5500Lbs combined with Booster Block
- CSBPlus: 2000 to 3500 Lbs. Max. 4500Lbs combined with Booster Block
- CSB: 2000 to 2500 Lbs. Max. 3500Lbs combined with Booster Block

Q. Do these come in Pairs?

A. Yes, each purchase includes a pair of buffers.

Q. Will this work my Hyundai Tucson 2009? or 2005 Chevy Equinox or 1999 Ranger? or 2010 Corolla? 2001 F150?

1. Please refer to manual on Choose the Right Size for Your Coil Spring (Ref. Selection Table)
2. If you picked the wrong size Buffers for your vehicle, please contact our service department.

Q. How much lift will these spacers provide after installation?

A. Around 0.5"-1.5" additional ground clearance, depending on the buffer size and your coil spring. Add Rubber Block Booster will increase another 0.25"-1"lift.

Q. Will it affect wheel alignment?

A. No, it does not affect wheel alignment. This is just a coil spring accessory to boost driving performance.

Q. Is this set for all four tires?

A. This product comes in pairs. Typically, front and rear springs are different sizes, so you will need to buy 2 pairs based on your spring size measurements. *Please refer to "Choose the Right Size for Your Coil Spring (Ref. Selection Table) on page 1

Q. How can I check the coil spring dimensions to see which buffer will fit my car?

A. Refer to CSB Series Fitting Table on page 1

Q. Will there be a squealing sound when you drive after installation?

A. No, it should not. Please apply enough WD40 to lubricate between the buffer and your vehicle spring.

Q. What are the included zip ties used for?

A. Buffers should always be tie up on the coil springs with the zip ties included in the CSB or CSBPro series. For CSB series, the front two holes can be used to tie the buffer on top of the coil springs. For CSB-Pro series, two ½ " diameter holes on each openings (at the center line and two inches from the openings) or using an F 13/16" drill head. Put zip tie through the hole and tie it to the coil spring. Make sure it is tightly zipped on both sides of the buffer.

To find the correct buffer size to fit your coil spring, please use the template provided above. Glue the template on thick board and cut out the step-ladder ruler. Place the bottom side of the template onto the coil and slide until you hit your mark. (***USE THE LARGEST GAP COIL MEASUREMENT TO DETERMINE YOUR BUFFER SIZE**)
