

Rear Coil Springs : DuraTPE® Series C
Ground Lifting Height : 1.0"

A recent customer asked us help recommend a buffers for his rear springs for his 2019 Honda CRV. He camps very often with all his camping gear and all necessary items to pack into his trunk. He also attaches a cantilever for his 200 lbs. electric scooter on his tow hitch . His SUV rear end bottoms out when he drives in and out the drive way. He wants to install buffers to retain the ground clearance after loading his camping gears and electric scooter. We pick CSB-C-R size C for his rear coil springs. He got around 1 inch lift on the rear end after installation. Clearance is acceptable and customers is satisfied with the result.
